

# Make-at-Home Honeycomb

The Make-at-Home Honeycomb is a community art project where all members of our community are invited to make their own hexagon(s) that will be permanently displayed as part of a large honeycomb across both The Deep and Metropolis (and eventually the MET makerspace)!

- Use the template below to make your hexagon the correct size.
- Make it out of any (non-perishable, non-hazardous) material you have access to at home and design it however you wish!
- You may put your name on it but you don't have to.
- If your hexagon is relatively thick or heavy, consider including a means for attaching it to the wall.

When you've finished your hexagon:

Drop it in the regular or campus mail to:

MIT Project Manus  
attn: Honeycomb  
77 Massachusetts Ave  
Bldg 35-237  
Cambridge MA  
02139

OR if it's a design that can simply be 3D printed, email [metropolis-staff@mit.edu](mailto:metropolis-staff@mit.edu) to see if we can run it remotely.
